

Topic: International Student Mobility and Economic Contribution: Australia's Position in the Global Education Market

Motivation: International education is important to Australia's economy, universities, and global position. After COVID-19, student enrolments and commencements changed significantly, making it important to understand recovery, source-country dependence, and economic impact.

Aim: To design an interactive dashboard that helps users understand Australia's international student growth, COVID disruption, source-country concentration, export revenue contribution, and global comparison through clear visual storytelling.

Click sector = Highlight, Scroll = Story section

Questions

1. How has Australia's international student system changed, recovered and positioned itself globally?
2. Which sectors grew or recovered?
3. What changed during covid?
4. Which countries dominate?
5. How's revenue linked to international students?
6. Is Australia globally leading destination for study?

Combine & Refine

KPI Overview
↓
Sector Growth 1+3
↓
Covid Shock 2+9
↓
Country Concentration 5+6
↓
Economic Value 7+8
↓
Global Position 10+11

Sheet 2

LAYOUT

INFO

Title: Australia's International Student Mobility & Economic Contribution Dashboard

Author: Enayargal Umurjargal

Date: 16/05/2026

Sheet No: 2

Audience: Ed policy regulators

Purpose: Provide quick overview of growth, Covid disruption, economic contribution & global position

Design Style: Executive Summary Dashboard

OPERATION

Year: KPI's, Sector trend, Covid Chart
Revenue trend
Updates selected time period

Sector: Sector trend, Sector Share
Covid Chart
highlights selected sector

Country: Country ranking, Country change
Global map
highlights selected country

Metric: KPI's & Main graphs
Switches view between enrollments

Reset: Whole Dashboard
Returns to default Overview

FOCUS

DISCUSS

- ✓ Fast Executive Overview
- ✓ KPI's make easy to scan
- ✓ Easier to apply R Shiny (clear grid layout)

- ✗ Can feel crowded, too many charts
- ✗ Less guided than storytelling design
- ✗ Some Deep insight might be missed

- ✗ May need stronger narrative flow

Sheet 3

LAYOUT

FOCUS

Selected Story Tab: Growth

Main Graph: Sector Enrolment Trend Line chart

This graph shows how international student enrolment changed across major sectors from 2005-2024. Each line represents one sector such as Higher Ed, VET, ELICOS & Schools.

What users should notice:

Higher Ed & VET are the main drivers of Enrolment growth, while smaller sectors show different recovery patterns.

Supporting graph:
Sector Share stacked area chart

This shows how the proportion of each sector changed overtime, helping users understand not only total growth but also structural change.

INFO

Title: Australia's International Student Impact Story

Author: Enayjargal Unurjargal

Date: 16/05/2026

Sheet No: 3

Purpose: Guide users through the main findings, one step at a time:
Growth, COVID, Source Countries, Economic value, Global Position

Audience: Decision maker & Education staff
Design style: Horizontal Story Dashboard (Slide based Narrative)

Main Visuals:

Growth → Sector trend
Countries → Top Source Countries
COVID → Enrolment VS Commencement
Economy → Revenue Relationship
Global → Ranking / Map

DISCUSS

Guides users through the international student story step by step instead of showing all at once.

- ✓ Clear narrative flow
- ✓ Less crowded than sheet 2
- ✓ Good for users without strong data background.
- ✓ Story tabs & next/back buttons make the dashboard easy to follow.

- ✗ Users need to click through sections to see the full story at once.
- ✗ Harder to compare charts.
- ✗ Requires careful navigation design during coding.

Decision: Strong for final design because it best support a guided interactive narrative.

(One key finding per screen)

OPERATION

Story tabs → Switch between overview, Growth, COVID Countries, Economy, Global

Next/Back → Guides users through the story step by step

Year, Country filter → Highlights Year/Country COVID / Global Sections

Reset → Returns to Overview & clear filters

Sheet 4

LAYOUT

INFO

Title: Australia's International Student Impact Explorer

Audience: Users interested in international education, including education staff & decision makers.

Author: Enayargal Umargal

Date: 16/05/2026

Sheet No: 4

Purpose: Allow users to explore the data by selecting the question they care about: Growth, COVID, Countries, Economy/Global.

Design style: Question based exploration dashboard

Difference: Unlike Sheet 3, user choose their own question

FOCUS

Selected Question: Which source countries dominate?

1. Main graph: Top Source Countries Horizontal bar chart
2. Supporting graph: A Small Number of Countries dominate enrolments, creating concentration risk.

Why it works: This design answers one analytical question at a time gives users more control.

OPERATION

- Question Cards → Switch between topics
- Year filter → Updates time based charts
- Sector filter → Sector highlights on Growth & COVID questions
- Country filter → Country highlights on Global questions
- Reset filter → Clears filters & returns to default mode

DISCUSS

- ✓ Clear link to research question
- ✓ Strong user control
- ✓ Good for exploration
- ✗ Less guided than sheet 3
- ✗ Users may skip important parts
- ✗ More conditional views to code

Decision: Good explanatory design, but final design may need stronger narrative.

Sheet 5

LAYOUT

Sheet 5

FOCUS

Selected Tab → Growth
Main graph → Sector Enrolment trend line chart
Supporting graph → Sector Share chart

This graph shows how international student enrolments changed across major sectors from 2005-2024. Each line represents one sector: Higher Education, VET, ELICOS, Schools.

What users should notice:
Higher Education and VET are the main drivers of enrolment growth while smaller sectors show different recovery patterns after COVID-19.

Why this focus works:
This screen introduces the main growth story before users move to COVID-19, Countries, Economy & Global.

Final Focus: One key finding at a time + KPI overview always visible.

INFO

Title: Australia's International Student Impact Dashboard

Audience: General users interested in International Education, including students, families, education staff and decision makers

Purpose: Help users understand Australia's international student growth, COVID disruption, source country concentration, economic contribution, and global position through a guided interactive story.

Design style: Final guided horizontal story dashboard

Design evolution: Combines Sheet 2 KPI Summary, Sheet 3 Story navigation, and Sheet 4 question-based exploration.

OPERATION

- T Story tabs** → Switch between Overview, Growth, COVID, Countries, Economy, Global
→ Changes main chart, story text and Summary
→ Guides users through the dashboard step by step
→ Supports fixed narrative flow
- Next/Back** → Updates KPI cards and time-based charts
- Year filter** → Used in Growth and COVID sections
→ Highlights selected sector
→ Used in Countries and Global sections
→ Highlights selected sector
- Sector filter** → Used in Growth and COVID sections
→ Highlights selected sector
→ Used in Countries and Global sections
→ Highlights selected sector
- Country filter** → Clears filters and returns to Overview
- Reset** → Clears filters and returns to Overview

DISCUSS

- ✓ Combines overview, narrative and exploration
- ✓ Less crowded than Sheet 2
- ✓ More guided than Sheet 4
- ✓ KPI cards make key information easy to scan
- ✓ Clear structure for coding later
- ✗ Needs careful tab and filter design
- ✗ Users may need to move between tabs to compare sections
- ✗ Some charts are hidden until selected

Decision:

Selected as final design because it best balances clarity, storytelling, user control, and coding feasibility.
